

## Welcome to the torbo newsletter - edition 01/2014!

In the current newsletter you will find important Datas & Facts, more information about torbo and the technology of wet sandblasting. Enjoy your reading. The torbo team will be happy to hear from you - via e-mail, fax or phone call - should you have any questions or suggestions about your special applications!

## torbo and Fischer JETplast in action at the Spanish Air Force

**Who wants to work for the military has to deliver top quality. When it comes to the maintenance and renovation of expensive aircraft in the Air Force, they look very accurate which system offers the best solution.**

After an intensive and long test phase with many competing options, the Spanish Air Force has now decided to use torbo as the best system for paint stripping of combat aircraft. For this task, the abrasive JETplast UREA (Type II) from the company Fischer GmbH in Dillenburg (Germany) is used, which is certified by the American Airforce. The advantage of the combination of torbo wet sandblaster and this blasting media: The for human health dangerous paint strippers are only still needed in some occasions. Another advantage of torbo: The work can be carried out in any existing hangar because it requires no specially equipped blasting hall. Two significant advantages for health and economy.
